Western Ag Industry Survey

Mark Marsalis, Extension Forage Specialist, NMSU Agricultural Science Center at Los Lunas

Results from the 2016 Western Extension Committee 'Ag Industry Survey' are now available (see press release on next page). This document gives an overview of farming trends and the economic condition of agriculture in the 13 western states based on completed surveys from producers across the region. The complete report can be found at:

<http://wec.farmmanagement.org/>.

Mark Marsalis, Extension Forage Specialist—New Mexico State University is an equal opportunity employer. All programs are available to everyone regardless of race, color, religion, sex, age, handicap or national origin, New Mexico State University and the U.S. Department of Agriculture cooperating.

2016 Western Ag Industry Survey

In early 2016, the idea for the Agricultural Industry Survey originated from a similar effort administered by a group of Colorado Extension Specialists. Members of the Western Extension Committees (WEC) on Farm Management and Marketing, made up of Extension economists from 13 Western States, Guam, and the U.S. Pacific Islands then initiated a survey specific to agriculture in the west.

The survey invitation was emailed to the WEC membership who distributed it through Extension contact channels.

*The survey report
is now available...*

Agricultural Industry Survey (AIS) results indicate there is emerging financial stress in the west but to a slightly lesser degree than reported nationally. This is likely due to commodity diversification and the relatively wide use of irrigation which has helped to buffer climate risk.

Western region price trends tend to be slightly higher than U.S. price trends with prices that are generally competitive or above U.S. values. However overall declines in price trends for major commodities in the west in 2015 and continuing into 2016 will persist and contribute to the gradual decline in farm income which is certain to exacerbate financial stress.

The economic environment is experiencing substantial shifts with agricultural risks becoming ever more complex. An expedient response requires a solid infrastructure to address these needs and situations as they emerge.

To read or download a copy of the survey report, point your browser to <http://WEC.FarmManagement.org>.

The Western Extension Committee is an organization of Extension Economists from the 13 western states, Guam and other Pacific Islands supported by Cooperative Extension Service Directors in the western region.
